

Create a hygienic environment with 3C: Clean & Clear Coating

Did you know?

Cockroaches can spread germs, feed on our food, trigger allergies, and leave odours.

Cockroaches are unhygienic and undesirable, especially in places like kitchens, canteens, clinics and schools. Using insecticide is risky, as it contains toxins that can harm humans as well. Our 3C: Clean & Clear Coating is an easy solution that's certified free from harmful materials.

How does it work?

The printed/lacquered surface repels insects on contact. When a cockroach comes close to the surface, a compound stimulates the nerves of the cockroach and prevents it from resting or colonising on the coating.

Did you know?

9 most dangerous chemicals are pesticides.*

Safe

The lacquer has been certified free from heavy metal and volatile organic compounds by a global third party testing company. The lacquer complies with safety standard EN71-3, which means it contains no harmful substances.

Hygienic

The 3C coating helps reduce the presence of cockroaches and other creepy crawlers without the need for pesticide use, making your work or home environment safe, hygienic and healthy. The coating has virtually no odour, and contains no harmful toxins.

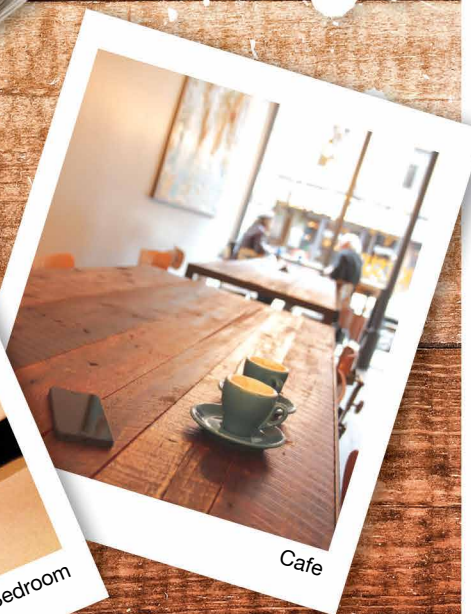

Suitable for:

- Kitchens
- Factories
- Clinics
- Canteens
- Schools
- Public toilets
- Public transport

*According to The Stockholm Convention on Persistent Organic Pollutants.
